

Measure for a Single Sink

A. Measure the total distance of the vanity.

B. Measure from the left to the center of the fixture and from the right to the center of the fixture. If these are equal the sink is centered.

C. Measure from the lowest point of the light fixture to the top of the splash. Note what kind of fixture you have. (Bar light, over hang sconces, etc.) Repeat step B to check how centered the light is relation to the sink. In general, a mirror should be 2" from the splash and 2-4" from the lights.

D. If your lights are mounted on the side measure the distance between them.

E. Length of light fixture if needed.
